

## Plazmennaya zashchita antenn SVCh: Metody umensheniya EPR (Russian Edition)

Rassmotren krug zadach, posvyashchennykh razrabotke struktur s upravlyaemyi prostranstvenno-vremennymi izmeneniyami elektrodinamicheskikh parametrov, obespechivayushchikh snizhenie radiolokatsionnoy zametnosti antenn i antennoykh otsekov i izmenyayushchikh spektr zondiruyushchikh signalov radiolokatsionnykh stantsiy. Issledovana vozmozhnost sozdaniya antennoykh sistem s nestatsionarnymi kharakteristikami rasseyaniya, v tom chisle za schet primeneniya iskusstvennoy vibratsii. Osoboe vnimanie udeleno ispolzovaniyu teoreticheskikh i vychislitelnykh metodov prikladnoy elektrodinamiki, a takzhe algoritmam, sochetayushchim strogie i priblizhennyye metody teorii difraktsii po otnosheniyu k probleme realizatsii sistem s upravlyaemyi kharakteristikami rasseyaniya i radiomaskiruyushchikh ekranov na osnove plazmennyykh obrazovaniy.
