

The European Theater of Operations LOGISTICAL SUPPORT OF THE ARMIES: In Two Volumes, Volume II: September 1944-May 1945 (United States Army in World War II)

This volume completes the bridge between combat and services in the European theater for which the author laid the foundations in Volume I. It is as important a book for combat commanders as for those who have to plan and execute logistical operations. It will leave the nonmilitary reader in no doubt of the enormous weight and complexity of the administrative burden that the Army had to assume to assure the success of its ground and air forces, and the resourcefulness with which it managed that burden. On the other hand, those who have to think about the future can here study a test of the principle of a single service of supply supporting the national element of allied forces under a coalition headquarters and a supreme allied commander.
